PORTFOLIO · 2026

Rabiya Ijaz
Product designer

Product designer for human–AI collaboration, based in Peshawar. I've spent 4+ years making complicated systems feel human, across recruitment, finance, healthcare and AI.

01 · AI RECRUITMENT · 2024–26

Vettio: an AI hiring platform that keeps candidates and recruiters in the loop

Role
Senior Product Designer

Timeline
Sep 2024 – May 2026

Context
Vettio, Dubai (remote)

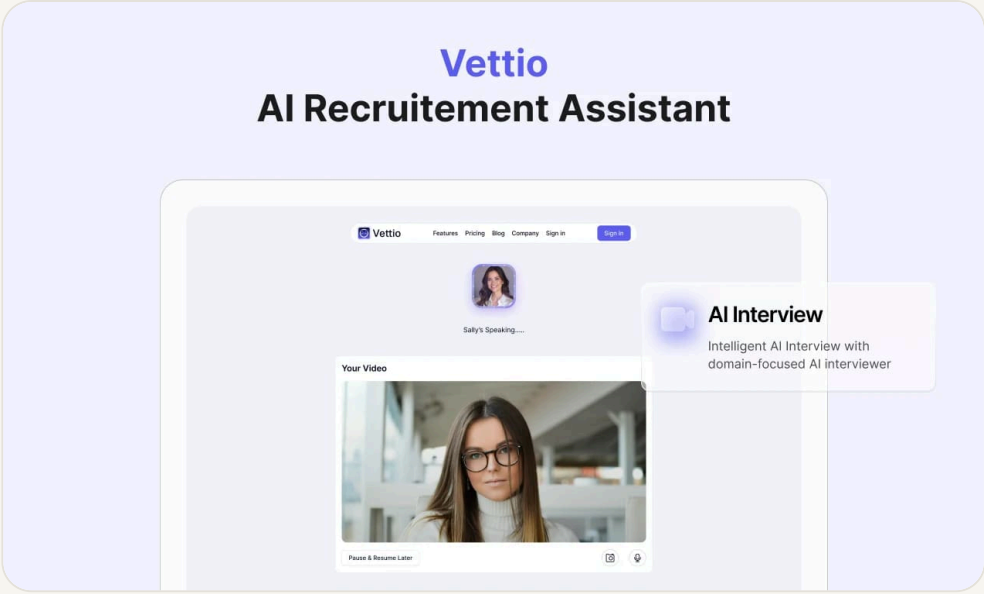

Status
Shipped, launched on Product Hunt

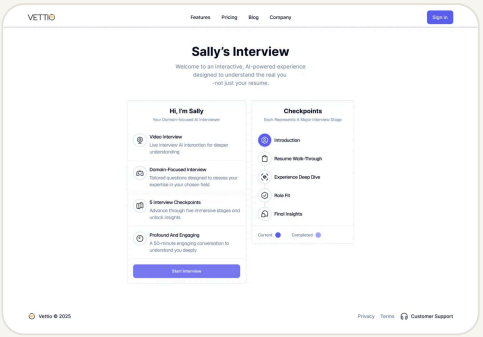

HCI lens **Explainable AI** **Fairness in AI decision support**

Vettio is an AI recruitment platform that shortens hiring on both sides. Candidates have one conversation with an AI agent instead of a weeks-long job hunt; recruiters get matched, interviewed candidates within a day of sharing a job description.

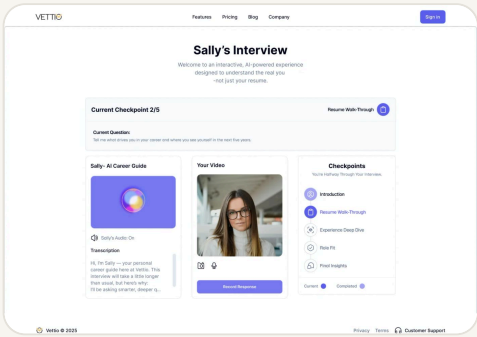

PROBLEM	Hiring is slow on both sides, and each side only sees half of it.
APPROACH	Turn a month-long hiring loop into one conversation and one day.
RESEARCH	Candidates didn't leave before the interview. They left during it.
DECISION	Show progress as checkpoints, not a question count.

Full case study: rabiyaijaz.vercel.app/work/vettio

Before starting, Sally shows the whole path.

During the interview, the current checkpoint stays visible.

02 · AI FINANCE · 2026

Crewnity: designing human-AI collaboration for small and medium-sized Saudi businesses' finances

Role
Lead Product Designer

Timeline
Jul 2026 – present

Context
Crewnity, Saudi Arabia (remote)

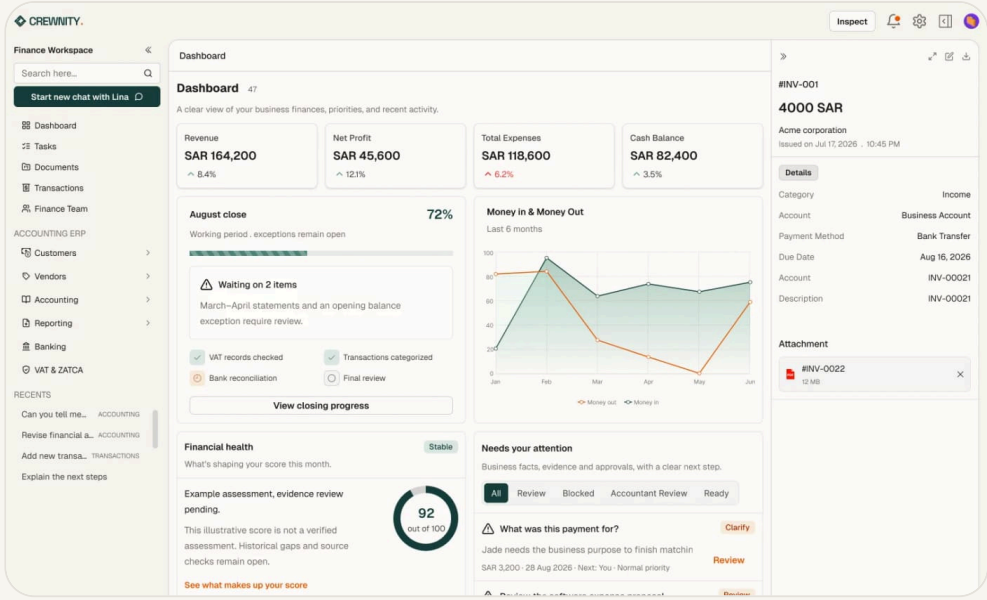

Status
Ongoing

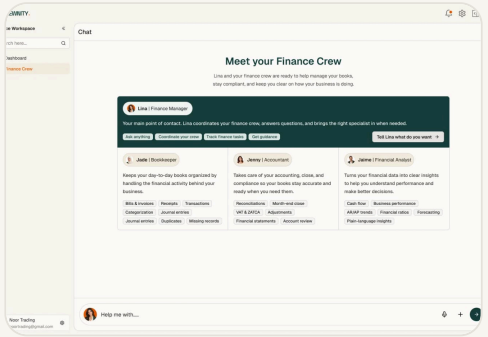

HCI lens **Human-in-the-loop design** **Mixed-initiative interaction** **Trust calibration in AI**

Crewnity gives small and medium businesses in Saudi Arabia a complete finance team they can simply talk to. A finance manager, a bookkeeper, an accountant and a financial analyst, all AI agents, working on your behalf. You drop in your documents and chat; they handle the books, VAT and ZATCA.

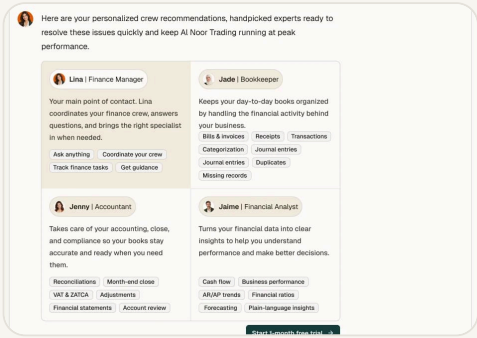

PROBLEM	Most small businesses can't afford a finance team, and can't speak accounting.
DECISION	Replace the finance software with a finance team you can talk to.
DESIGN	Drop your documents in. The crew does the rest.
PRODUCT	After setup, the whole business lives in one calm workspace.

Full case study: rabiyaijaz.vercel.app/work/crewnity

Meet your Finance Crew: one point of contact, three specialists behind her.

Every issue is routed to the agent who owns it.

03 · CLINICAL TRAINING · 2025

Flownet: designing shared workspaces for apprenticeships in Swedish government hospitals

Role
Lead Product Designer & Advisor

Timeline
Sep – Dec 2025

Context
Swedish government hospitals

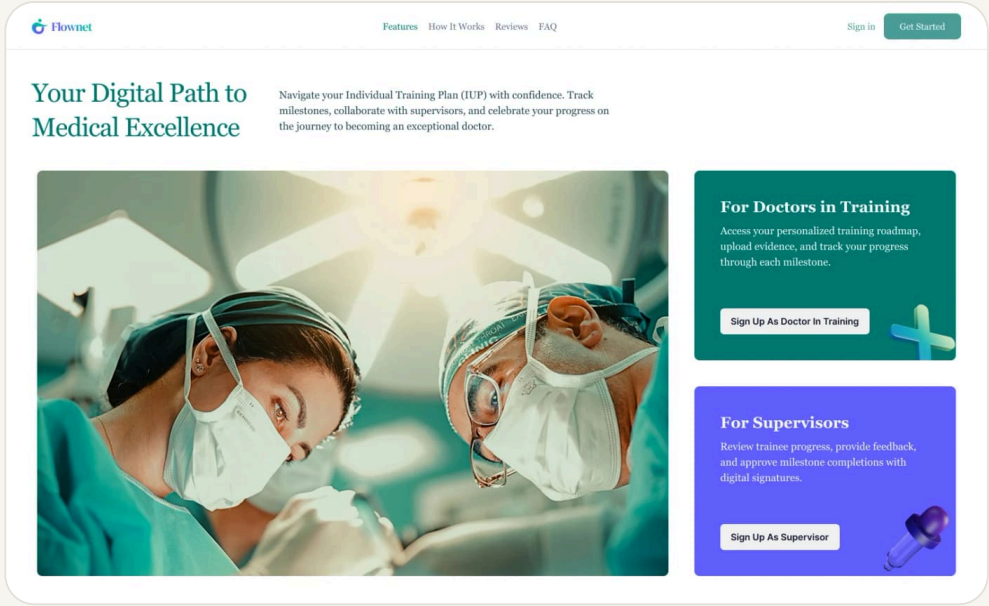

Status
MVP

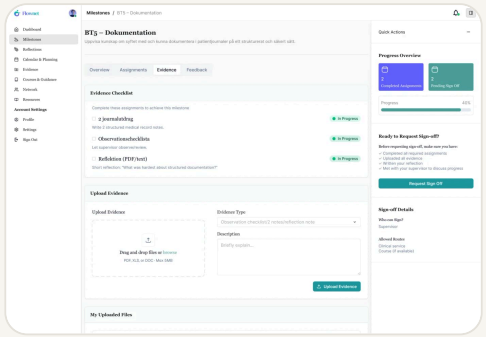

HCI lens **CSCW** **Invisible work in clinical practice**

Flownet is an MVP for specialist training in Swedish government hospitals. Doctors in specialist training collect evidence for their milestones, and supervisors review and sign off. I was Lead Product Designer and Advisor from September to December 2025.

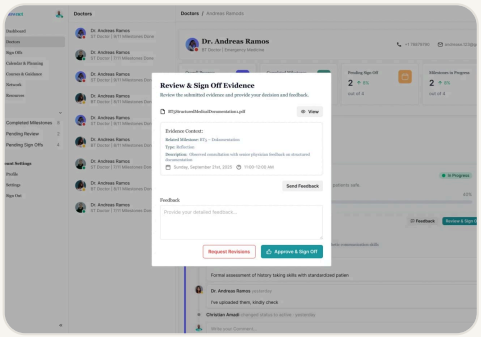

PROBLEM	Progress lived in binders, and sign-off happened away from the evidence.
RESEARCH	Interviews with doctors in training shaped three rules.
DECISION	Bring the evidence into the sign-off decision.
DESIGN	One product, two very different days.

Full case study: rabiyaijaz.vercel.app/work/flownet

The doctor attaches evidence to the milestone.

The supervisor decides with the evidence in front of them.

04 · WOMEN'S HEALTH · AI · 2026

CysterCare: a lifelong AI detection and care system for PCOS/PMOS

Role
Service Design Lead

Timeline
Research 2025 · Build Jan – Apr 2026

Context
Team Peshawar × Imaginathon

Status
Hackathon MVP, 5th prize

HCI lens **Service design** **Health information trust** **Designing for sensitive contexts**

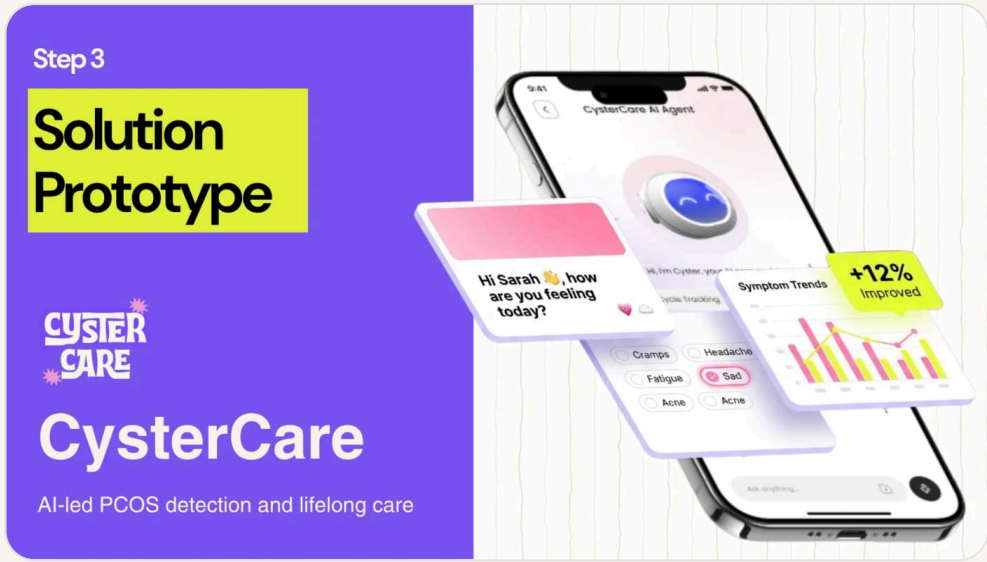

CysterCare is a lifelong AI detection and care system for PCOS/PMOS. It spots the early signs with an AI assessment, routes people to verified specialists for a diagnosis, and stays with them for the long run: symptom and cycle tracking, an AI care assistant, care plans and ongoing monitoring. It started as research in 2025 and became a hackathon build with Team Peshawar at Imaginathon, where it took 5th prize.

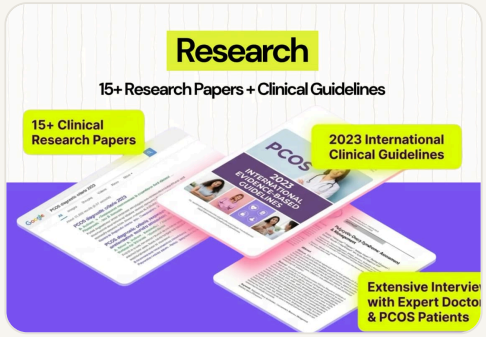

PROBLEM	PCOS/PMOS touches many specialties, and nobody holds the whole picture.
RESEARCH	Fifteen papers first, then ten conversations.
DECISION	Keep lived experience and evidence side by side, never mixed.
DESIGN	The app points to care. It doesn't replace it.

Full case study: rabiyaijaz.vercel.app/work/cystercare

Rabiya Ijaz · Product designer

Literature first, so the interviews could go deeper.

Pain points from the interviews, before they became flows.

05 · ACCESSIBILITY GAME · PERSONAL

Access Adda: an interactive card game translating Peshawar's physical barriers into universal design interventions

Role
Design and build

Context
Personal project

Status
Playable prototype

HCI lens **Participatory design** **Inclusive design** **Serious games**

Access Adda is an interactive card game that translates Peshawar's physical barriers into universal design interventions, set in real places across the city. Every round puts a real person in a real place with a deadline, and asks you to design your way past the barrier. I designed and built it as a personal project. You can play it in the browser at the link below.

PROBLEM	In Peshawar, access is usually a favour, not a feature.
CONCEPT	Every round deals a place, a person, a situation and a barrier.
DESIGN	Beyond the three rounds: the rest of the deck.
DECISION	Make a bad fix visibly worse than a good one.

Play it live: rabiyaijaz.vercel.app/work/access-adda#play

Full case study: rabiyaijaz.vercel.app/work/access-adda

06 · COMMUNITY · BRAND AND UX · 2026

Tamasha Banao: design strategy for a talent night at Banao.pk, Pakistan's builder community

Role
Banao.pk ambassador, design strategy

Context
Banao.pk community (volunteer)

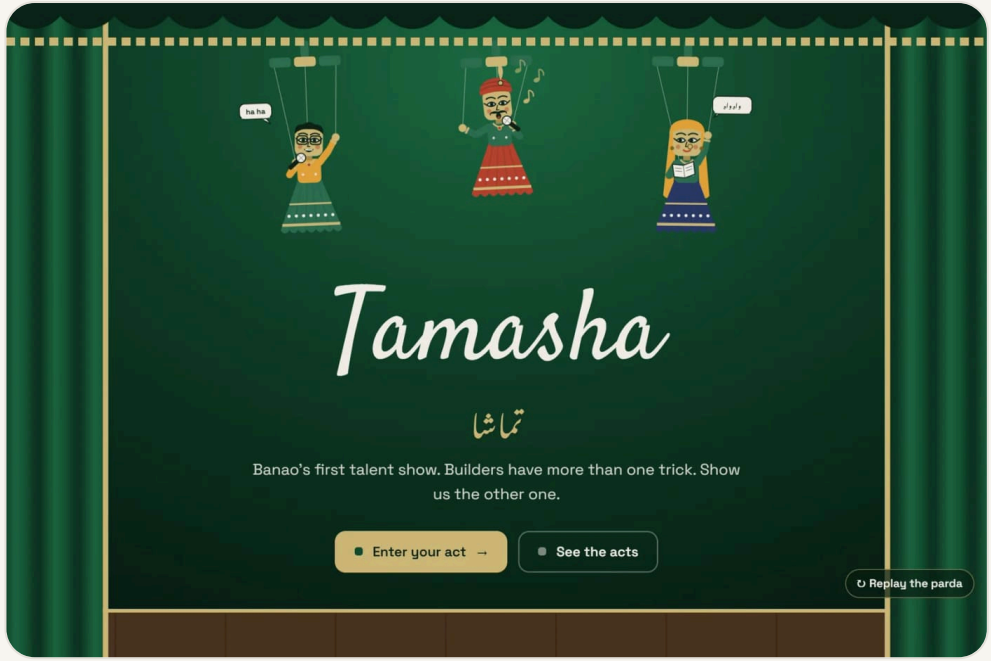

Status
Style direction v1 presented, Oct 2026

HCI lens **Community-centred design** **Culturally grounded design**

Banao is a Discord community where Pakistani founders, developers, designers and vibecoders show what they're making. Its tagline is "Where Pakistan builds." As a Banao.pk ambassador I help the community grow and run its events. Tamasha (تماشا) was my proposal for the next one: a talent show for everything builders can do besides building. I led the design strategy, from brand audit and concept to the character system, posters and website flow.

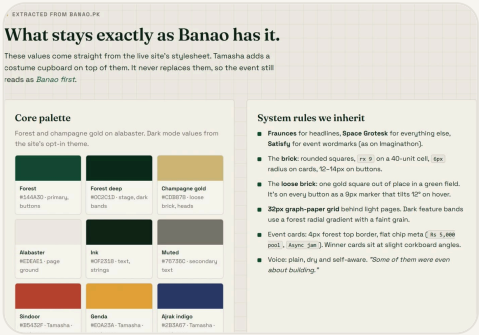

CONTEXT	A room for builders, with events that have a sense of humour.
PROBLEM	Every Banao event is about building. A talent show is about performing.
RESEARCH	Start from what Banao already owns.
RESEARCH	Four references, each turned into a rule.

Full case study: rabiyaijaz.vercel.app/work/tamasha

Style direction v1: Banao's brick system, strung up like a kathputli.

Extracted from banao.pk. Tamasha adds a costume cupboard on top; it never replaces the core.

07 · GYM MANAGEMENT · AI · PERSONAL

RepShep: an all-in-one gym system with AI retention on WhatsApp

Role
Designer

Context
Personal project

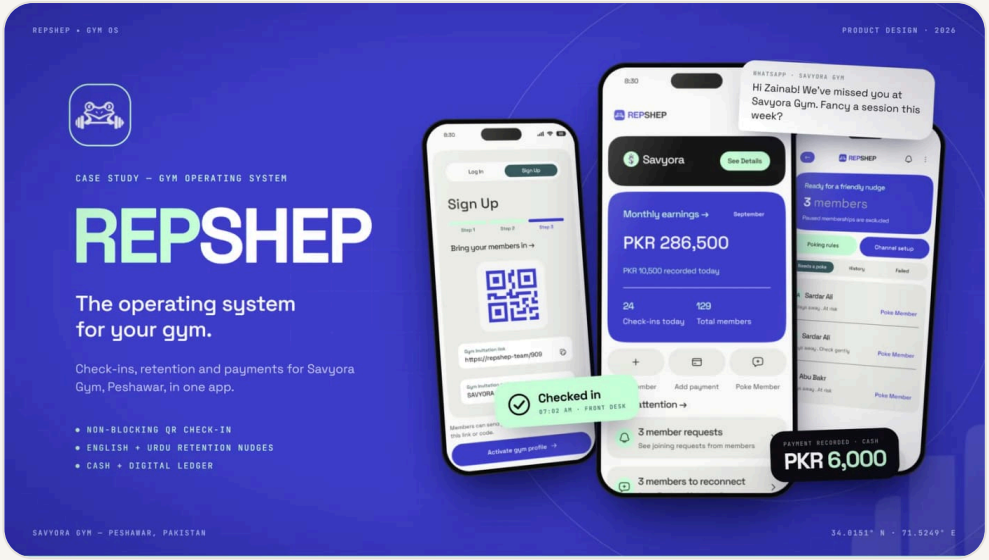

Status
In progress

HCI lens **Persuasive technology and behaviour change** **Human-in-the-loop AI**

RepShep is a complete management system for gyms, built for large gyms with many members: memberships, payments, attendance and staff in one place, plus AI workflows that send members nudges over WhatsApp to keep them coming back. It's a personal project, in progress. All data is mock, and I haven't run user research yet.

PROBLEM	Every overdue payment is a person.
DECISION	AI workflows prepare the nudge. The gym approves it.
DESIGN	When a message fails, say so.
REFLECTION	In progress: the AI workflows are next.

Full case study: rabiyaijaz.vercel.app/work/repshep

ABOUT

I make complicated systems *feel human.*

I'm Rabiya, a product designer in Peshawar. Over 4+ years across recruitment, finance, healthcare and AI, my work has kept coming back to one question: when should a system stop and ask the person?

I start with research, design for trust, and stay close to the build, including working with AI coding partners under my direction.

Open to new product design work, remote, hybrid or on-site.
